

PROJECT REPORT – DIGITAL LITERACY

Name: Anushka Jaiswal

Registration Number: 25MIP10008

**Branch: Integrated M.Tech Computer
Science (Computational and Data Science)**

Year: First Year

Course Code: CSE0001

Course: Digital Literacy

Title: NGMC Graded course

Platform: VITyarthi

Introduction

In today's digital age, being digitally literate is essential for students to navigate the online world effectively and responsibly. This project was undertaken as part of the Digital Literacy course, where I assumed the role of a Student Digital Ambassador. The objective of this project was to explore various aspects of digital literacy, including online safety, professional digital presence, communication etiquette, and awareness of cybercrime.

Through five different tasks, I gained hands-on experience in using digital tools, creating professional profiles, and understanding responsible online behavior. This project not only enhanced my technical skills but also helped me understand the importance of maintaining a safe and professional digital identity. Overall, it was a valuable learning experience that will benefit me throughout my academic and professional journey.

Task-1

For Task 1, I created a digital literacy awareness infographic using Canva. The infographic focused on key topics such as the importance of digital literacy, safe internet practices, and maintaining a professional online presence. I designed the infographic in a simple and visually appealing manner so that it would be easy for students to understand and engage with the content.

The infographic highlighted essential points like using strong passwords, avoiding suspicious links, and being mindful of online behavior. I also included examples of useful digital tools that students can use for learning and collaboration.

While creating the infographic, I found it interesting to explore Canva's design features, such as templates, icons, and color combinations. However, one challenge I faced was organizing the information in a clear and concise way without making the design too crowded. This task helped me improve my creativity and communication skills by presenting important information in a visual format.

Task-2

In Task 2, I created and updated my profiles on various professional platforms, including GitHub, LinkedIn, and Kaggle. These platforms are essential for building a strong digital presence and showcasing skills to potential employers and academic communities.

GitHub is used for sharing and managing coding projects, while LinkedIn is a professional networking platform that helps connect with peers, recruiters, and industry professionals. Kaggle is a platform for data science and machine learning practice, where users can participate in competitions and learn from datasets.

I completed the basic setup for each platform by adding my educational details and creating a professional profile. In the coming years, I plan to regularly update my profiles, upload projects, and actively engage with these platforms to build my portfolio.

This task helped me understand the importance of maintaining a professional online identity and how it can impact future career opportunities.

Task-3

For Task 3, I explored coding and collaboration platforms. I created an account on HackerRank and completed a beginner-level problem, which helped me understand the basics of coding practice platforms. It was a good introduction to problem-solving and logical thinking.

In addition, I created a Google Form as a Digital Literacy Awareness Quiz consisting of five questions. The quiz included both multiple-choice and short-answer questions to test basic knowledge of digital literacy and online safety. I also reviewed the responses using the linked Google Sheets feature.

This task was particularly useful as it introduced me to tools that can be used for both academic and practical purposes. Coding platforms help improve programming skills, while Google Forms is useful for conducting surveys and quizzes.

Overall, this task enhanced my technical skills and gave me confidence in using online tools for learning and collaboration.

Task-4

In Task 4, I learned about professional communication and email etiquette. I drafted two emails—one to a professor requesting an assignment extension and another to an internship coordinator expressing interest in an opportunity. This helped me understand the importance of using a clear subject line, polite tone, and proper structure in professional emails.

I also created a social media Do's and Don'ts checklist to promote responsible online behavior among students.

One example of poor digital communication is when a student sends an email using informal language or an unclear message, leading to misunderstandings. This can create a negative impression and reduce the chances of a positive response.

This task highlighted the importance of clear, respectful, and professional communication in both academic and professional settings.

Task-5

In Task 5, I explored cybercrime awareness by studying different types of online threats. I created a case study and a prevention checklist to help students stay safe online. While researching this topic, I was surprised to learn how common cybercrimes like phishing and online payment fraud have become, especially among students.

I realized that even small mistakes, such as clicking on suspicious links or sharing personal information, can lead to serious consequences.

As a result, one habit I will change is being more cautious while browsing the internet and verifying sources before taking any action. This task made me more aware of online risks and the importance of practicing safe digital behavior in everyday life.

Conclusion

This project provided me with valuable insights into digital literacy and its importance in today's world. Through various tasks, I learned how to use digital tools effectively, maintain a professional online presence, and communicate responsibly. I also gained awareness about cybercrime and the importance of online safety.

Overall, this project helped me develop both technical and practical skills that will be useful in my academic journey and future career. It encouraged me to become a responsible digital citizen and apply these learnings in my daily life.
